About us

Founded in 2006 in Montreal, Canada, Lumenpulse designs, develops, manufactures and sells a wide range of high performance and sustainable specification-grade LED solutions for commercial, institutional and urban environments.

While other LED lighting manufacturers have their roots in either electronics or traditional lighting, Lumenpulse's distinctive combination of strong industrial design and electronics knowhow has enabled the company to innovate ahead of its rivals and to offer more options for sustainable interior and exterior lighting.

The company designs and manufactures its durable, high-performance fixtures in families to ensure that they are simple to specify and configure. Its luminaires offer a "crayon box of options" — myriad choices of optics, colours, accessories and finishes — that allow designers to solve all types of lighting challenges.

STRASBOURG CATHEDRAL OF LIGHT

Lumenpulse is proud to have supplied nearly 400 luminaires for this project.

Our Design Philosophy

1. We think in families
Scalable families of products ensuring visual consistency across applications.
2. We build to last
Sustainable industrial design, allowing wearable parts to be replaced, backed by a 5-year warranty.*
3. A crayon box of options
Luminaires offer choices of optics, colours, accessories and finishes, promoting greater flexibility.
4. Control
Innovative control technologies, agnostic to all control standards worldwide.
5. Quality of light
Our unique binning technology, Lumenbin, ensures colour consistency and best-in-class photometric performance.
6. Ease of installation
Designed with a fluid compatibility and an ease of installation that saves time and money.

*10-year warranty for Lumencove Nano 2.0.

We think in families

In all its many iterations, the family is one of the most enduring partnerships. Our designs are modelled on a family-like sense of allegiance, cooperation, and innate compatibility.

We build to last

Longevity is a tell-tale sign of true quality. Our designs focus on an unflinching sustainability throughout a lengthy lifespan. Every component is tested and tried to the highest global standards of quality.

A crayon box of options

Flexibility, adaptability, and choice are key concepts in all our designs. A variety of options, from optics to finishes, gives everyone from designers to end-users versatile products for every environment.

Control flexibility

There should be no lighting without lighting control. Our luminaires are compatible with multiple control systems. Take control using, 1-10V, DALI, DALI2, DMX/RDM, Lutron® EcoSystem® or use our innovative Lumentalk technology to enable digital control over your existing AC wiring.

1-10V

DALI

DALI2

Opticolor supplies a quality of light unlike any other. Colour you can feel. Within inches, Opticolor gives you ultra near-field colour and beam blending. Opticolor technology boasts in-house, Lumenpulse engineered optics and a multi-chip LED cluster that enables optimized colour combinations. This allows the future. You've seen colour, now feel Opticolor.

A New Dimension of Colour

Quality of light

Our optics possess unbeatable design features, such as outstanding glare control/visual comfort, a consistent colour temperature over time, and best-in-class performance. We designed them that way; we experimented until we got it right. Quality is something we insist upon; exquisite light is our business.

Technologies

Maintaining a technological edge is part of Lumenpulse's success, as is our obsession with design. We insist on creating products that are user-friendly and technologically sound.

lumenbin™

Ensures colour temperature consistency across all Lumenpulse luminaires.

lumenlife™

Calculates the true-life expectancy of a luminaire.

lumencool™

Allows air to flow between the driver and LED board resulting in a lifetime of up to 120,000 hours.

lumencurve™

Lumencurve is a proprietary technology embedded in Lumenpulse luminaires that ensures consistency of dimming performance across product families and control protocols.

lumenID™

A method of intelligently addressing fixtures using an embedded serial number.

lumendrive™

This technology directly powers, dims and controls LEDs.

lumendim™

A proprietary firmware that allows Smooth White light dimming.

lumengrid™

A controls-agnostic plug and play 48VDC system that can create scalable yet simple lighting projects that are low maintenance and optimised for efficiency.

A Lumenpulse Group technology offering full flexibility in tuning luminaire colour temperature (2200K to 3000K).

An embedded Lumenpulse Group technology that reduces a luminaire's colour temperature, allowing for smooth variations in warm white light. (2700K to 6500K)

An embedded Lumenpulse Group technology that reduces a luminaire's colour temperature when dimmed (2700K to 2200K)

Opticolor is a patent-pending Lumenpulse technology that features a multi-die LED cluster enabling highly configurable colour combinations that are mixed within the optic. Opticolor utilises individual colours that are binned to within 5nm.

Enables digital control of LED lighting over existing AC power lines, saving time and money.

Is an enhancement of DMX, allowing for simple, convenient commissioning.

Lumendrive powers LEDs with AC voltage, while still allowing full digital dimming and control. By dispensing with a power supply, the technology provides multiple benefits, including greater efficiency, smaller size and a lifetime no longer restricted by third-party components.

An embedded ASIC microchip eliminates the need for onboard power supplies.

Your fixture has a lot to say.

How Lumentalk Works

Lumentalk turns regular electrical wiring into a stable digital addressable control network using DMX, DALI, 1-10V, or TRIAC.

Over 400+ projects worldwide are using Lumentalk.

A Simple and Economical Solution

Why don't you just use the existing power lines to control your lights? You can, you know. You can forget about costly rewiring, disruptive renovations, and altering the architecture.

A Reliable and Secure System

Lumentalk is a tried and tested technology. It is a digital, power line communicator that adapts to any situation. Lumentalk is not a controller, it facilitates transmission of standard protocols and all the wires you need are already sitting in your walls.

An Adaptable System

Because Lumentalk is a digital system, it is inherently flexible. You'll no longer be constrained by the physical layout of your wiring. Lumentalk is geared towards the future, you can regroup, reconfigure, and reprogram at will – digital control means freedom.

Always looking forward

We produce over 400 specification-grade products¹ which are completely complementary to each other thanks to the unifying abilities of Lumenpulse Group technologies. Staying ahead of the curve is important in this industry. Amongst numerous patents granted and pending, we have created, what we believe to be, six proprietary technologies that have helped push the LED lighting industry into the future.
